

BRAIDS, CABLES, AND STRANDS

High-quality custom braids, cables and strands call for a high degree of technical expertise, precision manufacturing equipment, and short lead times—all core strengths of New England Wire Technologies.

We've earned a solid reputation for our ability to turnaround both large and small orders in record time. And many of our braids, cables and strands are in stock and ready to ship.

As a leading producer of high-quality braided products, New England Wire Technologies designs and manufactures flat-wire braiding, braid-reinforced tubing, scope braids and insulated braids. Our products are used for applications such as ground strap, motor brush leads, circuit breaker shunts, flexible bus bar, RFI/EMI shielding and shielding for mechanical protection of single or multi-conductor cables. We also create flexible cables and strands for use as flexible conductors in custom single and multiconductor insulated cables.

Be sure to check with our sales department for information on custom conductors designed to meet your specific requirement.
