

## AUDIO/VIDEO CABLES

We are in the midst of an entertainment and multimedia revolution and delivering high quality sound and pictures has never been more important.

That is why so many audio, video and home entertainment equipment manufacturers partner with New England Wire Technologies when they need to eliminate electromagnetic distortion and reduce dielectric losses.

We produce custom wire and cable products utilizing materials such as oxygen-free copper with gold, silver, nickel or tin plating, magnet wire, and Litz conductors as well as our proprietary NEWcel® dielectrics and NEWtral® low-noise coatings and compounds. Plus we offer custom color matching, custom printing and special strand configurations. New England Wire Technologies can meet the quality demands of high-end consumer and commercial audiovisual installations including home entertainment systems, recording studios, and theaters for both speaker and component connections. With the addition of our manufacturing facilities in China, we are now able to cost effectively produce high volume, custom audio/video cables. Call for a price quote today.
