

MICROMINIATURE & MINIATURE COAXIAL CABLES

Our line of miniature coaxial cables range in size from microminiature 42 AWG to 8 AWG in both custom and standard shielded, round or flat-wire braided and spiral and foil-wrapped constructions. Additionally we offer a large selection of extruded dielectric materials including polyethylene, polypropylene, fluoropolymers such as FEP, PFA and ETFE as well as full-density and expanded PTFE tapes.

Custom microminiature and miniature coaxial cables can be manufactured in production runs as low as 1000 feet. Please contact our design team to discuss how our capabilities can best be applied to your custom coaxial cable requirement.

Microminiature 42-34 AWG	99
Miniature 32-34 AWG1	99
