

## TRADE NAME PRODUCTS & CAPABILITIES, *continued*

### **NEWlan™ NETWORK CABLES**

Our networking cables have the high bandwidth you need for current 1G applications as well as emerging standards like IP-based full motion video, IP-based security, Voice Over IP and 10G Ethernet applications. So your investment in networking cable is fully protected.

Our enhanced CAT-6E Gold cables comply with TIA/EIA 568-8 and ISO/IEC 11801 Class E standards while offering the ultimate in attenuation, cross-talk, signal-to-noise ratio and return loss performance.

### **NEWguard™**

Our NEWguard™ cables are custom designed for the most challenging and demanding environments. In extreme conditions, cable becomes a critical link that supplies low voltage power, control and data signals. NEWguard™ cable remains flexible while meeting environmental challenges such as extreme temperature, mechanical abuse, presence of strong chemicals, exposure to oils, dust, wind, salt water spray and vibration.

### **COLDflex GROUND CABLE™**

Our custom compound gives COLDflex Ground Cable™ the voltage rating, dielectric strength, temperature rating and flexibility to make handling easy — even at temperatures as low as -40°C. This allows you to get grounding cables off the reel and quickly installed in cold weather.

### **HYflex™ Power Distribution Cables**

HYflex™ power distribution cables incorporate a uniquely designed, high performance insulation specifically formulated for use in heavy duty diesel hybrid vehicles and high strand count, flexible conductors to produce cables ideally suited for applications where flexibility, long life and performance is critical.
